

Digital Forensic Analysis — Technical Report

Investigation INC-CORPUS-A · incident INC-CORPUS-A

Field	Value
Case	Investigation INC-CORPUS-A
Incident id	INC-CORPUS-A
Status	open
Severity	unspecified
Prepared	2026-08-13 01:38:07Z
Times	All timestamps are UTC

CONTAINS EVIDENTIARY MATERIAL — HANDLE AND DISTRIBUTE ACCORDINGLY
Indicators appear defanged and must not be re-armed to be acted on.

Contents

1. Case metadata
2. Scope and authorization
3. Evidence inventory and chain of custody
4. Tools and versions
5. Methodology
6. Timeline of confirmed activity
7. Findings by host
8. Memory analysis
9. Indicators of compromise
10. Correlation — why these hosts are one campaign
11. Links considered and declined
12. Attribution
13. Negative findings — what was ruled out
14. Limitations and confidence
15. Containment and eradication performed
16. Recommended actions
17. Audit trail

Case metadata

Field	Value
Case	Investigation INC-CORPUS-A
Incident id	INC-CORPUS-A
Status	open
Severity	unspecified
Opened	2026-08-13 01:29:32Z
Concluded	—
Hosts examined	20
Collection runs	20
Data as of	2026-08-13 01:38:06Z

All times are UTC. Timestamps are recorded by the platform in UTC and are rendered here unchanged; a reader working in another zone must convert.

Scope and authorization

Examined: **20** host(s) — DC-01-REBUILT, DC-02, JUMP-01, SRV-APP-01, SRV-BACKUP-01, SRV-DB-01, SRV-FILE-01, VPN-GW-01, WS-001, WS-002, WS-003, WS-004, WS-005, WS-006, WS-007, WS-008, WS-009, WS-010, WS-011, WS-012.

Every host named in the collected evidence was itself examined.

Evidence inventory and chain of custody

Host	Capture	Size	sha256	Custody events	Chain
DC-01-REBUILT	memory_DC-01_SYNTHETIC.raw	8.0 MB	a0fdc1d01b09eaa5...	4	intact

Custody chains: **20 intact, 0 broken**. Platform audit ledger: **verifies**.

Both verifications were recomputed when this report was generated; neither is a stored flag.

Tools and versions

Reproducing this analysis requires the same versions that produced it.

Component	Version(s)
Collection toolkit	ir-toolkit/1.x
Memory analysis engine	native-scan

Methodology

Evidence was collected by the toolkit on each endpoint, sealed at the point of collection, shipped to a holding tier, and pulled inward by the platform. Nothing was pushed into the analysis environment.

Memory images were analyzed server-side; findings were adjudicated against this ladder, weakest to strongest:

False Positive · Likely False Positive · Indeterminate · Likely True Positive · True Positive

An analyst's verdict takes precedence over the engine's and the disagreement is kept. Only the two strongest terms assert compromise; the rest record degrees of uncertainty and are reported as such.

Timeline of confirmed activity

Indicators are **defanged** — rendered unclickable — so that reading this document cannot resolve or contact attacker infrastructure.

Correlation — why these hosts are one campaign

Correlation ran at algorithm version 2.0, producing 2 campaign(s) from 66 candidate host pair(s), of which 38 were linked.

Campaign EmberFox · WS-007

- Members: 10 host(s), confidence High
- Entry point: WS-007 via T1566.001
- Activity: 2026-07-15 08:14:00Z to 2026-07-15 12:34:00Z
- Cohesion: mean 0.565, weakest internal link 0.425

Campaign VPN-GW-01 intrusion

- Members: 2 host(s), confidence Medium
- Entry point: VPN-GW-01
- Activity: 2026-07-15 06:10:00Z to 2026-07-15 06:10:00Z
- Cohesion: mean 0.420, weakest internal link 0.420

WS-003	WS-012	0.1231	updates.fleetvendor.example	rarity 0.224 — reads as environment
WS-007	WS-012	0.1231	updates.fleetvendor.example	rarity 0.224 — reads as environment

These pairs shared evidence and were **not** joined. What an engine rejected, and on what grounds, is part of the record: it is the difference between a conclusion and a coincidence.

Attribution

No attribution candidate reached the threshold for this case.

This platform does not name a culprit. The rows above record technical similarity to previously recorded activity, which is evidence of resemblance and not of identity. Asserting a specific actor would overstate what this evidence supports.

Negative findings — what was ruled out

Removable media was the entry point — ruled out by uat-life-examiner on 2026-08-13 01:38:02Z.

- How it was tested: Every USB device recorded on the affected hosts was enumerated and compared against the first evidence of compromise on each.
- Why the conclusion holds: No device predates the earliest implant, so none can be the source.
- Rests on: run:461

Limitations and confidence

What this evidence cannot say, stated rather than implied:

- **0** memory analysis run(s) failed. A failed analysis is not a clean host; it is a host on which the question was not answered.
- **20** collection run(s) completed only partially.
- **8** capture(s) have been purged under retention policy. Their findings survive; the images they came from cannot be re-examined.

Where the platform could not verify something, it is recorded as unverified rather than as a negative result.

Containment and eradication performed

- 2026-08-13 01:38:02Z — Blocked the C2 address at the perimeter (uat-life-collector)

Recommended actions

1. **Rotate the shared administrative credential** — It was used on every affected host and must be considered exposed.

Audit trail

2 audit entr(ies) name this case directly. The platform's hash-chained ledger verifies end to end as of this render.

Every adjudication, export, assignment and evidence disposal is in that ledger, attributable to a person.
